

Objective Definition - Language Agnostic Chatbot

Project Objective

The primary objective of the Language Agnostic Chatbot is to enable seamless communication between users and digital services regardless of the language they speak. The chatbot should automatically detect the user's language, understand the query, and provide accurate responses in the same language or a preferred language.

Specific Objectives

- Support multiple languages including regional Indian languages.
- Automatically detect the language used by the user.
- Provide accurate and context-aware responses.
- Enable text and voice-based interactions.
- Improve accessibility for users with different linguistic backgrounds.
- Reduce communication barriers in education, healthcare, customer support, and government services.
- Deliver fast, secure, and reliable chatbot services.

Expected Outcome

The system will allow users to interact naturally in their preferred language, improving user experience, accessibility, and service efficiency while promoting inclusive digital communication.
