

Database Requirement Analysis - Language Agnostic Chatbot

1. Introduction

Database Requirement Analysis identifies the data that must be stored, managed, and retrieved efficiently for the Language Agnostic Chatbot system.

2. Database Objectives

- Store user information securely
- Maintain chat history
- Store multilingual responses
- Manage knowledge base content
- Generate reports and analytics

3. Main Database Entities

Users: User ID, Name, Email, Password, Role

Chat History: Chat ID, User ID, Query, Response, Timestamp

Languages: Language ID, Language Name, Language Code

Knowledge Base: Question ID, Question, Answer, Category

Reports: Report ID, Type, Generated Date

4. Database Requirements

- Secure storage of user data
- Fast query processing
- Data backup and recovery
- Multi-user support
- Scalability for future growth

5. Suggested Database

MySQL or PostgreSQL can be used as the relational database management system for storing and managing chatbot data.

6. Conclusion

A well-designed database ensures efficient storage, retrieval, security, and management of multilingual chatbot information.
